

Cryptshare for Outlook

Making email better

Making email better.

Every day your business exchanges a wealth of data with customers, suppliers, and partners. Most of the communication contents are created in MS Office applications and sent via MS Outlook. However, often the information is highly confidential or captured in files that are simply too big to send via email. So what happens then?

There are many different ways to get around this problem but our advice is to use the tools you already have!

Cryptshare for Outlook enables you to securely share confidential emails and files without size restrictions, completely ad hoc via your regular email directly from your familiar Outlook environment. By solving these known problems in email Cryptshare provides the fastest and most simple solution.

Extend the power of your email

Cryptshare, however, provides more than low-cost security. Our customers report that the usability and productivity gains from using Cryptshare in their daily work life deliver far greater benefits than just financial savings. The user interface is familiar and intuitive to use and offers key functions as they are required. The interface design integrates into MS Outlook seamlessly and is focused on ease of use and a positive user experience. No training is required. The transfer manager sidebar provides a clear status of all current incoming and outgoing transfers to the user.

It also allows control over passwords, file attachments, and all sent and received emails. A prominent one-click button enables users to send emails and large files via Cryptshare as quickly as a standard unencrypted email. Customers tell us that the Cryptshare add-in makes sending large files and sensitive information straight from their familiar email environment simple and part of their daily routine.

So why look for any other way to do this?

Sender

- Sidebar for upload and download status
- Control assigned passwords
- Send entire folders by drag and drop
- Easy to use

Recipient

- Save emails and files directly to your inbox or to your local disk
- No browser needed
- Add-in free of charge for external recipients

Easy administration, more security, less cost

Cryptshare's powerful policy engine enables specific risks to data in your organization to be countered and policies for use to be defined centrally from a comprehensive administration console based on defined needs. From a central server inside your DMZ Cryptshare is, by default available to all of your email users. You may elect to create different policies for different groups, providing legal, administrative and economic advantages.

It also lets you comply with data protection guidelines easily. A self-cleaning system without the need for daily user management keeps administrative efforts low and gives your IT time to focus on other pressing tasks. Furthermore, using Cryptshare reduces the load on the company's email system and therefore offers the opportunity to save money and resources on storage and back up.

In combination with a simple pricing model return on investment for use is measurable and short.

Administration

- Use of several email accounts and assigning different Cryptshare servers to each
- Central management of policies and options
- Simple company-wide rollout
- User data retrieved from MS Active Directory
- Powerful policy tools to enforce compliance rules via Cryptshare server

Security

- Encryption of subject line to protect you from social engineering attacks
- Sender verification to protect you from SPAM and Spoofing.
- Transport encryption via TLS and perfect forward secrecy.
- Strong encryption of emails and files whilst stored and in transit

Added Value

- Relieves email server from large file attachments
- No licence cost for external recipients or senders
- Acceptance and productivity through familiar Outlook working environment
- Makes compliance and data protection easy

Cryptshare SMS gateway feature for & Outlook

Cryptshare's SMS gateway feature offers a new level of convenience for your communication. For the secure transfer of a password, it is recommended practice to use a communication channel that is separate from email. The Cryptshare SMS gateway feature is a quick and easy way to transmit even complex passwords via SMS, making password transfers for senders and recipients effortless.

- A new way for password transfers
- No more extra manual effort for sending passwords
- More convenience for your communication

The screenshot shows the 'TRANSFER DIALOG' window. Under 'TRANSFER SETTINGS', the 'EXPIRATION DATE' is set to 6/18/2020 and 'RECIPIENT LANGUAGE' is set to English (United Kingdom). Both 'Encrypt Message' and 'Encrypt Subject' are checked. Under 'Confirm delivery', 'Confirm delivery' is checked and 'Expose file names in notification mails' is unchecked. The 'Security Settings' section shows 'Security without passwords' is enabled, with a 'QUICK' button. A blue informational box states: 'QUICK will automatically manage security for all transfers between you and the recipient without having to use passwords. QUICK invitations must be secured with a one-time password.' Below this, 'Generate password' is selected. The 'PASSWORD' field contains 'moSjTM]r'. A green box notes: 'You can look up the password in the Transfer Manager sidebar after the transfer has been sent.' A 'Confidential' warning box is also present. At the bottom are 'BACK' and 'START TRANSFER' buttons.

The screenshot shows the 'TRANSFER DIALOG' window at the 'NUMBER SELECTION' step. It prompts the user to 'Please select the numbers to which the password should be sent by text message.' There are two contact entries: 'John Doe <John.Doe@cs4otest.com>' with mobile number '+44 123 456789' (selected with a checkmark) and 'Peter O'Toole <Peter.O'Toole@cs4otest.com>' with number '+44 987 654321'. Each entry has a checkbox, a name/email, a phone number field, and icons for adding, deleting, and copying. At the bottom are 'BACK' and 'CONFIRM' buttons.

No more password troubles.

QUICK combines convenience for users and security for your data in transit. It creates permanent secure connections in seconds and takes care of all passwords for the exchanges between communication partners.

Pointsharp is a European cybersecurity company that enables organizations to secure data, identities and access in a user-friendly way. Because we believe easy to use security solutions lay the foundation for a modern digital workplace.

We deliver European made software and services that are made to support even the highest security and regulatory demands of large enterprise organizations and governmental institutions.

Our customers can be all around the world, often in markets requiring extra high levels of security, like the financial, governmental, industrial and defense sectors.

You can find our HQ in Stockholm, Sweden but we also have offices in Germany and the Netherlands.
