

Take control of AI and the data it depends on

Strengthen security, control costs,
scale innovation, ensure compliance.

What is Rencore Governance?

Rencore inventories your digital workplace, apps, automations and AI agents. See what each one can reach, then set the rules they need to follow.

Compliance

Rencore Governance strengthens compliance by applying your policies consistently across all cloud services and managing information throughout its lifecycle. With structured provisioning and clear resolution processes, your organization can maintain its standards reliably at scale, ensuring both internal and external policies are always followed.

Risk & Security

Rencore Governance reduces data risk by preventing oversharing, strengthening access control, monitoring permissions, and continuously identifying potential vulnerabilities across your environment. This ensures your data remains protected, and your organization maintains a resilient security posture.

Cost

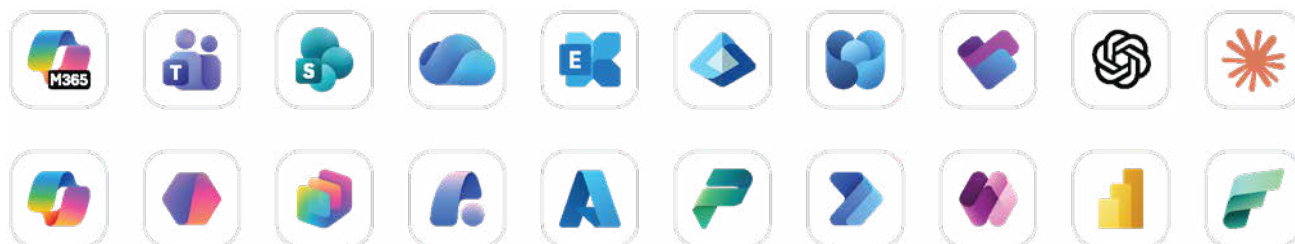

Rencore Governance optimizes spending by managing storage, licensing, and service usage to eliminate excess consumption and unnecessary costs. This helps you control expenses, improve resource efficiency, and achieve greater long term financial value from your investment.

Innovation at Scale

Rencore's modern governance strategies provide the controls needed to roll out new technologies safely and consistently. By combining governance automation with guided end-user self-service, Rencore Governance keeps your cloud compliant, efficient, and easy to manage.

One control plane. Every surface.

Responsible Microsoft cloud governance

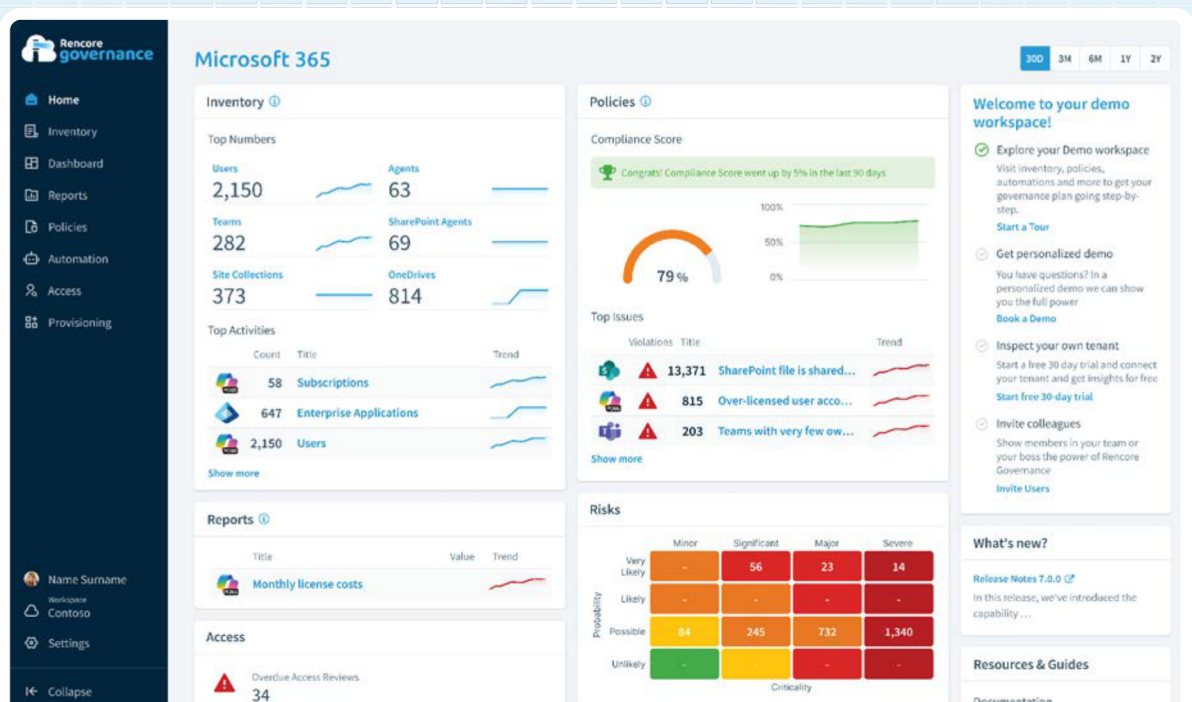

MODULE

Digital Workplace

See who can reach every Team, site and file across Microsoft 365, rank what is risky, then stop oversharing and clear out sprawl before Copilot surfaces it. Rencore Governance turns that insight into action across Teams, SharePoint, OneDrive and more, without slowing your people down.

-  Declutter resources
-  Manage access and oversharing
-  Optimise license and storage costs
-  Provision resources

A must-have for a **secure, efficient modern workplace**

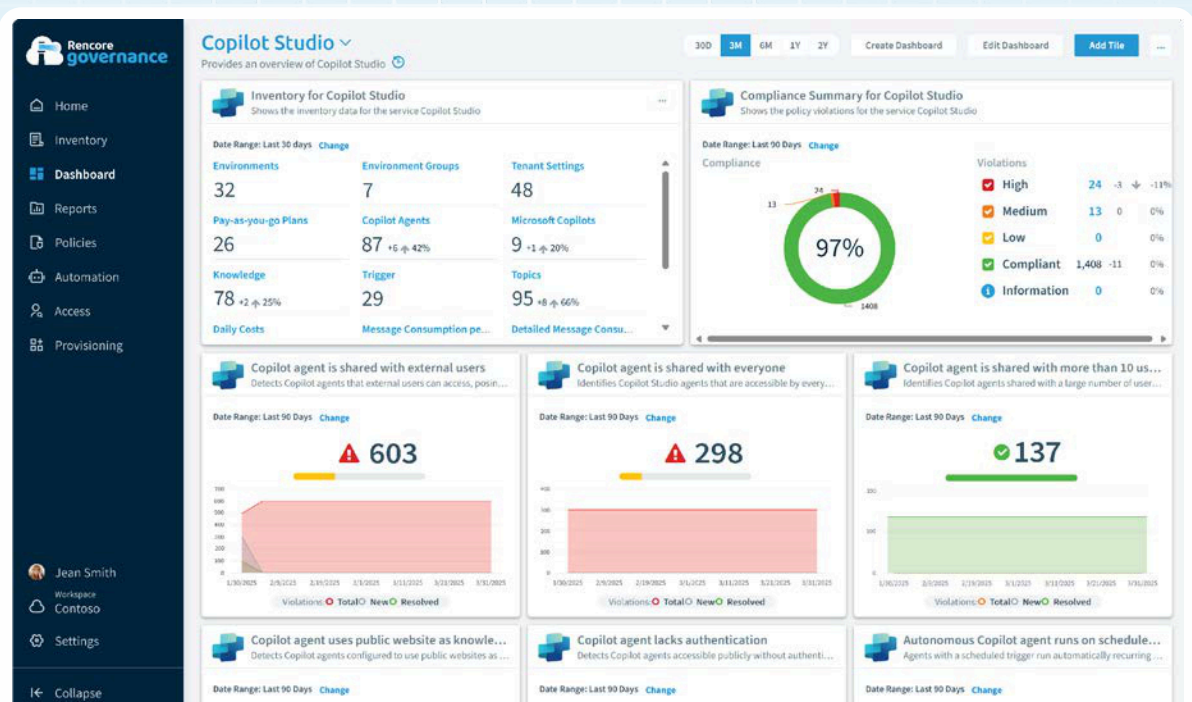

MODULE

AI & Agents

Find every LLM and AI agent across Microsoft 365, Anthropic and OpenAI, see the data each one can reach, then rank the risk and enforce policy. Rencore Governance gives you one control plane for AI and agents, so you can say yes to AI without losing control.

- Prevent information oversharing
- Control agent sprawl
- Optimise Copilot costs
- Validate information accuracy

MODULE

Apps, Automation and BI

See every Power App, flow, Power BI report and Copilot agent your people build, rank the ones that carry risk or cost, then enforce policy or retire them. Rencore Governance gives you one control plane across the Power Platform, so you reduce risk, stay compliant and keep costs predictable.

-  Centrally manage all Power Platform resources
-  Automate application lifecycle management
-  Secure data and resource access
-  Optimise complex licensing tariffs

About Rencore Governance

Rencore Governance is a SaaS software essential for staying in control of Cloud Collaboration, AI, Agent and No-Code/Low-Code services. Rencore Governance is used by leading organizations around the globe, and built in Germany with the highest security and performance standards in mind. It is hosted on Microsoft Azure, fully SOC 2 Type 2, ISO 27001:2022, and ISO 27017 accredited.
