

WithSecure™ Elements

Built in Europe, powered by AI, and designed with MSPs, our Elements Cloud platform and expert services protect customers before threats become problems.

WithSecure™ Elements is a comprehensive cybersecurity solution that brings together both technology and service components for mid-sized companies and MSPs. It provides proactive and reactive capabilities to cover your 360° cybersecurity needs, from threat identification and protection to incident response and recovery.

You can deploy each Elements component individually or as a full suite of services and software modules. Enhanced by comprehensive integrations and the WithSecure Luminen™ AI assistant, Elements is the all-in-one platform that supercharges the work of your IT team.

CYBERSECURITY™
MADE IN EUROPE

Software Modules

Exposure Management

WithSecure™ Elements Exposure Management (XM) is a continuous and proactive solution that predicts and prevents breaches against your company's assets and business operations. It provides visibility into your attack surface and enables the efficient remediation of its highest-impact exposures through a unified view, thanks to AI-powered recommendations. The solution recommends security posture improvements based on asset exposure scores enriched with business context, attack path simulation, and dynamic threat intelligence inputs.

Elements XM unifies data across your digital estate to reveal your full attack surface – workstations and servers, agentless devices and network equipment, identities, cloud services, and external assets like IPs and custom web apps. It finds and prioritizes vulnerabilities and misconfigurations, gives clear guidance or automated actions for fast remediation, and delivers business-ready risk summaries that build confidence.

- ✓ 360° view of your organization's cyber risks.

Extended Detection and Response

WithSecure™ Elements Extended Detection and Response (XDR) includes Endpoint Security, Identity Security, Collaboration Protection, and Cloud Security. Elements XDR keeps you protected and helps you detect and respond to cyberattacks rapidly and effectively. It covers endpoints, cloud resources, digital identities, email, and Microsoft 365 collaboration tools.

Endpoint Security

WithSecure™ Elements Endpoint Security (ES; consists of EPP and EDR) delivers continuous protection for your endpoints, enabling your servers, workstations, and mobile devices to stay resilient against cyberattacks. Its award-winning capabilities cover protection, detection, and response against modern malware, ransomware, phishing, and data breaches.

Endpoint Protection

WithSecure™ Elements Endpoint Protection (EPP) provides comprehensive protection for your endpoint devices. It combines a multi-layered security approach for automated prevention of threats with security hardening tools like patch management, application control, and control over disallowed content.

OS coverage: Windows, macOS, Linux, Android, iOS, and ChromeOS.

- ✓ Autonomous and extensive device protection.

Endpoint Detection and Response

WithSecure™ Elements Endpoint Detection and Response (EDR) detects advanced threats that can evade EPP and enables the fast investigation of potential incidents. Elements EDR monitors events for building situational awareness, provides AI-guided or automated response actions, and equips you with robust investigation tools.

OS coverage: Windows, macOS, and Linux.

- ✓ Powerful tools for endpoint detection and response.

Collaboration Protection

WithSecure™ Elements Collaboration Protection (CP) fortifies the built-in security measures of Microsoft 365. Its powerful security layer wards off malicious content and phishing attacks, and detects account compromises and inbox rule manipulations. The solution covers your email, SharePoint sites, OneDrive, and Microsoft Teams.

- ✓ Secure your teamwork across Microsoft 365.

Identity Security Elements ES required

WithSecure™ Elements Identity Security (IS) is an identity threat detection and response solution that protects organizations against identity-based attacks. It detects potentially compromised Microsoft Entra ID identities that are used by attackers to access cloud-based services, for example via Single-Sign-On (SSO). Take automated or AI-guided response actions to swiftly stop attackers in their tracks.

- ✓ Detect and respond to identity-based attacks.

Cloud Security Elements ES and IS required

WithSecure™ Elements Extended Detection and Response (XDR) Cloud Security provides threat research-based detection for your Azure cloud environment. It secures your cloud resources against threats like data breaches, resource hijacking, and ransomware. The easy-to-use solution empowers security analysts to quickly learn cloud tooling for the most important use case: taking quick action to mitigate cloud threats.

- ✓ Visibility and threat detection for cloud resources.

Services

Technology is only part of the solution. True resilience requires experts who can monitor, detect, and respond around the clock. WithSecure™ gives you the flexibility to boost your existing capabilities — or outsource cybersecurity operations to us.

On-demand Elevate Elements EDR required

WithSecure™ Elevate provides expert support directly through the Elements Cloud platform during an active detection. When an Elevate request is submitted, a WithSecure specialist investigates the findings and guides your response with prompt, expert guidance.

- ✓ **Immediate guidance when it matters.**

Managed Detection and Response

WithSecure™ Elements Managed Detection and Response (MDR) expands your EDR capabilities with continuous monitoring, AI-powered investigations, and rapid response from WithSecure cybersecurity experts. Threats are contained quickly before they can impact your business, with optional Co-Monitoring available to extend coverage when your team needs additional support.

Combined with the MDR for Identities add-on, you can further strengthen your defense against identity-based threats.

- ✓ **Ransomware attack & data breach prevention.**

Elements Infinite

WithSecure™ Elements Infinite is a 24/7/365 premium turnkey service that brings every essential defense capability into one unified, fully managed solution — combining deep insights, extensive protection, and expert-led response. Backed by certified threat hunters, our research-driven and proactive service delivers top-tier expertise around the clock.

- ✓ **24/7/365 high-touch, outcome-driven security.**

Incident Readiness

WithSecure™ Incident Readiness empowers organizations to prepare for cyber incidents through structured response planning and focused practice. We develop and review Incident Response Plans and Playbooks to clarify roles and actions. Tabletop and simulation exercises allow teams to validate readiness and improve decision-making.

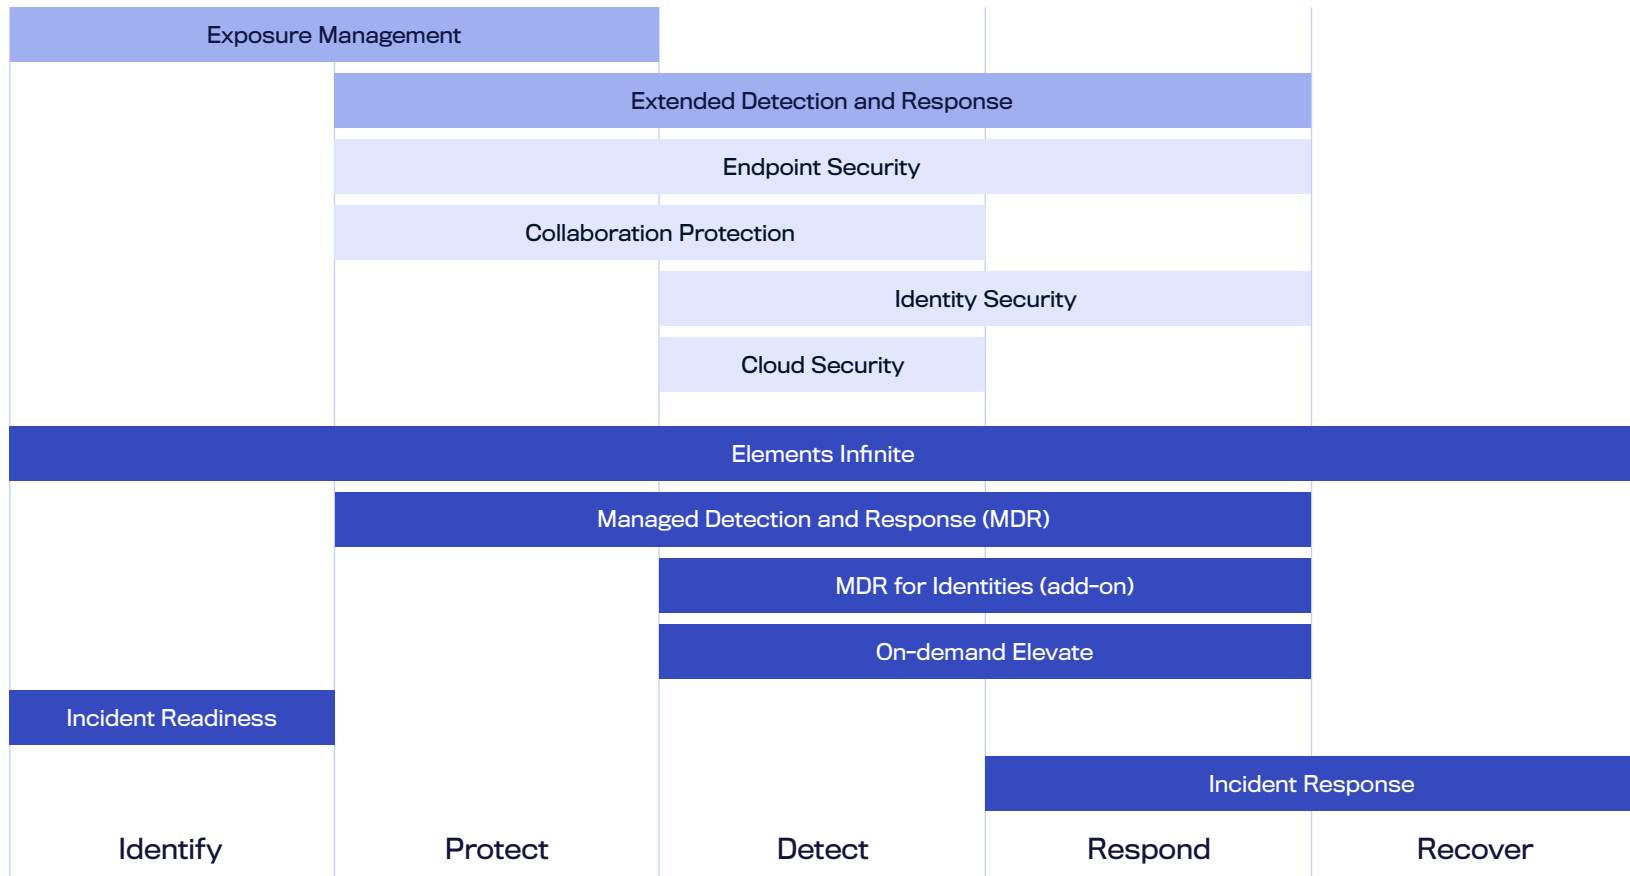

- ✓ **Build readiness & reduce impact.**

Incident Response

WithSecure™ Incident Response Retainer ensures priority access to Digital Forensics and Incident Response (DFIR) specialists when a crisis occurs. It includes a structured onboarding workshop and clear activation guidance to enable rapid, coordinated action. The service is technology-agnostic and does not require WithSecure product usage.

- ✓ **Immediate action when you're under attack.**
